

New Flashing Yellow

Left-Turn Arrow

Now at the intersection of Campbell Ave. & Primrose St.

Use of flashing yellow left-turn arrows is considered an improvement to safety at signalized intersections. It provides a more direct message of caution to drivers to yield to oncoming traffic than does the circular green light.

How does it work?

A green left-turn arrow allows drivers to make protected left turns from the eastbound-to-northbound direction.

When yellow left-turn arrow begins flashing, drivers must yield to oncoming vehicles and pedestrians.

When the yellow arrow stops flashing, drivers should prepare to stop.

A steady red arrow means STOP. Drivers turning left must wait.
